Metropolitan Water District of Southern California **College Grant Program**

In 2006, the “International Decade of Fresh Water” was proclaimed by the United Nations to raise awareness about global water issues. To underscore the importance of water quality and conservation issues, Metropolitan partnered with the United States Department of the Interior, Bureau of Reclamation, Sanitation Districts of Los Angeles County, Water For People and Friends of the United Nations to create a grant competition for local colleges and universities that would promote new water conservation technologies and policies or communications programs. The Forum also helps to generate student interest in engineering, environmental science and related careers in the water industry, promoting economic and workforce development.
