

ORANGE COUNTY FEEDER RELINING PROJECT

THE METROPOLITAN WATER DISTRICT OF SOUTHERN CALIFORNIA

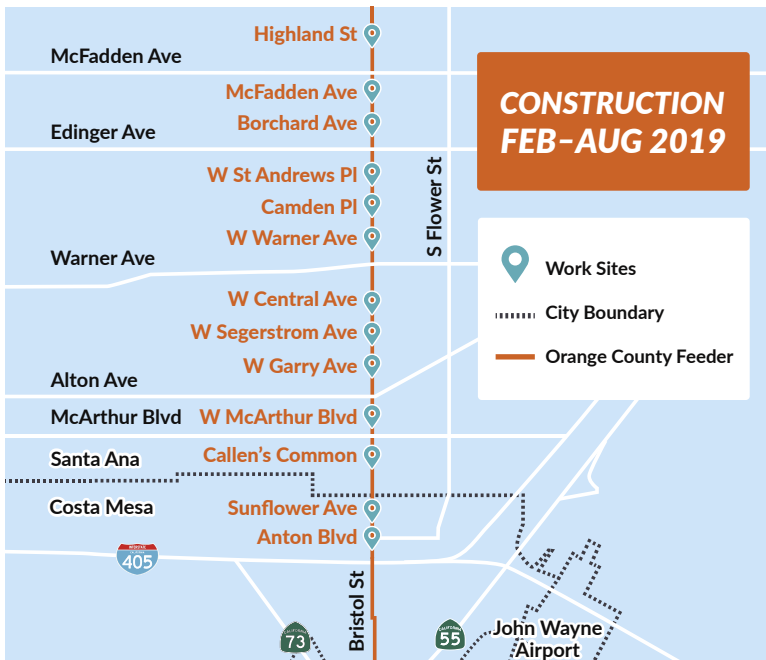

Project Profile

The Metropolitan Water District of Southern California is making key improvements to the Orange County Feeder, a major pipeline in the regional water system that delivers water from the F.E. Weymouth Water Treatment Plant in La Verne to six member agencies in Los Angeles and Orange Counties. The lining that protects the pipe is nearing the end of its service life and requires replacement. Rehabilitation of this pipeline is required to ensure reliable water supply.

What You Should Expect

- Temporary traffic delays and lane closures
- Water supply will not be affected

By the Numbers

The Orange County Feeder began operation in 1941 and is constructed of welded steel	The portion to be relined is 3.73 miles long
Work will occur at 13 locations down Bristol St in Santa Ana & Costa Mesa	The pipeline has a 36" to 39" diameter
This feeder delivers nearly 18 million gallons of water per day on average	Each location will take approx 10 weeks to complete and 6 locations may be under construction at once

MWD Overview

The Metropolitan Water District of Southern California is a state-established cooperative of 26 member agencies—cities and public water agencies—that serve 19 million people in six counties. Metropolitan imports water from the Colorado River and Northern California to supplement local supplies and help its members develop increased water conservation, recycling, storage and other resource-management programs.
