Subject: FW: IRP Groundwater Update

Hi Maria/Kathy:

After discussing with both of you and reviewing the attached spreadsheet further, we are a bit confused with the origin of the data for groundwater basins.

The only basin we are withdrawing water from at this time is El Monte Basin.

However, the City is currently investigating some of the groundwater basins listed below within its jurisdiction that might bring localized supply opportunities. Given the multiple challenges associated with the development of these groundwater resources, the City at this point is only exploring the feasibility of these conceptual groundwater resources to determine if there is potential of considering them as a future water supply source. We had provided the table below on the “conceptual” yield of the basins that we were hoping to recover:

MWD Tracking	1. GWR - GW Recovery 2. REC - Recycled 3. SWD - Desalination	Project/Sub Project	1. Existing 2. Under Construction 3. Full Design & Appropriated Funds 4. Planning (EIR/EIS Certified) 5. Feasibility 6. Conceptual
k187	GWR	Mission Valley Brackish Groundwater Recovery Project (City of San Diego)	Feasibility
k23	GWR	San Diego Formation Well Field and Treatment Facility (City of San Diego)	Feasibility
k190	GWR	San Pasqual Brackish Groundwater Recovery Project (City of San Diego)	Feasibility
k289	GWR	San Vicente and El Capitan Municipal Supply Wells (City of San Diego)	Existing

Will this table be sufficient?

Because all of our work is still at the conceptual level, we are limited in our ability to provide additional data. If additional data is required it would take us a number of weeks to investigate and vet out.

Please advise.

But we have updated City of San Diego reservoir data in the attached spreadsheet.

Thanks

Seevani Bista, P.E.

Subject: IRP Groundwater Update

Dear Member Agency Managers and Staff,

Attached is an excel spreadsheet indicating agency draft projections for surface water, groundwater production, and projections of sources and amounts of groundwater recharge in normal and multiple-dry-year situations. This information will be used in Metropolitan's 2015 update of its Integrated Resources Plan (IRP). This update will help to identify strategies and policies formulated to address potential regional deficits of groundwater recharge under multiple-dry-year scenarios.

Please review the spreadsheet carefully **and provide corrections to the production and recharge projections in RED font** for those basins/reservoirs under your jurisdiction beginning in calendar year 2014 on through 2050 (data is shown by calendar year). Also provide a brief explanation regarding your assumptions/rationale for any corrections in RED font as well.

Please return the modified spreadsheets to the attention of Maria Mariscal AND Paul Gebert with a copy to David Sumi and Kathy Kunysz by Monday, June 29. If you have questions, please call Kathy Kunysz, with MWD at (213) 217-6272. The adjusted projections will be discussed at an upcoming IRP workshop scheduled later this summer. Thank you.

Regards,

Maria Mariscal
